

## Centre Pieces

Centre pieces or ceiling roses are decorative elements attached to the ceiling from which a chandelier or light fitting is often suspended. They are typically round in shape with a variety of ornamental designs.

Ornate Interiors offer a comprehensive range of 29 centre pieces ranging from a diameter of just 375 mm to pieces measuring 2500mm across. With different styles to create a whole spectrum of effects, you can use them to enhance a ceiling area whilst complementing the cornice and drawing the eye to the light feature.

**Case Study**  
Leeson Park, Dublin

A property in one of Dublin's most exclusive quarters has rolled back the years with a complex restoration project involving the skills and craftsmanship of Ornate Interiors.

The Leeson Park area is located in the prestigious Dublin 4 area of Ireland. One of the houses has recently undergone a year long refurbishment that has seen it transformed from 12 self contained flats into a single family residence of 24 rooms.

Many years of wear and tear had taken its toll on the stunning plasterwork and Ornate Interiors was called in to reinstate the features back to its original condition.

The project involved a range of fibrous plasterwork including the production of four different cornice moulds and two types of ceiling rose both coming out of back and face moulds. Enrichments to the arches and cornice were also reproduced.

The entire project took nine weeks and involved three fixers in situ as well as two dedicated workshop staff creating the moulds.
